Subject: Renewable Energy Alternative.....

Dear City Council Members -

Am no tree hugging activist; far from it. But CREBL's suggested use for renewable energy on a 100 acres of the Baylands makes a lot of common sense to me and have supported the idea -- would prefer it to be more.

Additionally feel that UPC's 4,000 plus habitat proposal is outrageous, (initially thought it to be a few hundred), and am surprised that the whole scenario hasn't been nipped in the bud/rectified by now as I was under the impression that they knew the existing EIR's when they purchased the property and would comply.

Anyway, guess you are doing your best, but amazed this crap, (pardon my language), has been going on so long, as it is becoming really tired to most residents in our little city. Feel I can legitimately state the latter having lived here on Humboldt for over 30 years.

Can hardly wait[sic] to look once again at the same old dirt being moved here and there with the continual dust blowing in our windows this summer.
